

Letters to Worldnet Grace Ministries

May & June 2013

Note: Some of the letters below make references to our having sent out mp3 players with our messages stored on them. We would like clarify that we have not sent out any products or materials, nor do we have the resources to do so. We are indeed very grateful for those anonymous donors who are providing these items and not taking the credit for their generosity.

("USM" abbreviation = United States Military)

May 2013

How amazing. Your messages have always spoken into my life so powerfully. Lately I've had several issues. I didn't know the Scriptural approach on dealing with them. Last week I was considering writing you for your opinion. Then I listened to the woman at the well. I was amazed as the lesson unfolded every question I had was answered - in order! Oh thank you dear pastor for being the vehicle for the Holy Spirit to teach me!

Missouri

I've been listening to these messages and they've really encouraged me. Then the lesson on the disaster at Nazareth really got to me. I've been thinking that my problems were external. The enemy who wants to kill me. And Jesus wouldn't make them go away. He was doing just what you said. I was worrying about externals but he was focusing internally. He's been working in me now, and just as you said, I'm a better soldier now. I'm making wise decisions and yes, the enemy is becoming less of a threat. It works!

USM

I'm telling you even before I tell my mother. I listened to the lesson on that wedding. I listened just because I love Chuck Berry and thought it might be interesting. Well it was a hell of a lot more than just interesting. Moms been praying for me to be saved for years. She got it. I'm saved.

USM

Physics professor's April 20, 2013 email:

Johnny, another fascinating insight. So now I'm wondering if you have any more of these serendipitous thoughts about the Unified field theory?

Thanks again.

Johnny's May 10, 2013 reply:

Professor,

First, let me say that I have read very little about Einstein. However, I have read his own writings. I've always been intrigued by his words on his deathbed: "I cannot finish this work, it will be forgotten, but it will be rediscovered in the future". As you know, he was speaking of his unified field theory equations. It's a shame how his initial calculations have been largely overlooked. I wish some of these young cosmologists would pick up what he started instead of trying to develop theories about multiverses (which are impossible to prove or disprove – what a waste of time!)

Based on his equations I have seen, it's obvious that he's done the heavy lifting – he laid out the overall equation path including correct placement of the lemniscates. I believe that a skilled mathematician could solve it in a matter of a few months.

Unfortunately, the young mathematicians are obsessed with using the recursive principle, mistakenly believing that they are uncovering more and more principles. One day I was sitting in the barber's chair, looking at the reflection in the mirror. At first glance it appeared that more and more information was being revealed in the multiple reflections. I realized that, actually all I was seeing was multiple iterations of the same scene, but with progressively less clarity. That is my opinion of the recursive theory. Ostensibly more information, but actually the same information perceived with progressively less clarity.

I apologize for taking so long to say that Einstein's equations simply need to be finished!

For complete interchange, see separate link under "Letters from our Listeners" entitled "Special: May - February 2013 Interchange with a Physics Professor"

The sermon on the synagogue at Nazareth was unbelievable. {Life of Jesus #22} People thinking their Messiah was going to pay their bills and mortgages, give them free health care. Wow. What a frightening picture of America. Come Lord Jesus.

Oakland, California

The lesson about the demon at Capernaum answered so many questions I've always had. {Life of Jesus #23} It was so encouraging to know that Satan or his demons cannot possess me or even throw ideas into my mind. Praise God!

Honolulu, Hawaii

OK so what is your agenda? Do you have the guts to admit it?

The Vatican

Johnny's reply: Sure. Here's my agenda: I get up about 6:30 and normally arrive at church about 7:45 or so. I hope that helped.

As a college student, I am so grateful for the Pre-History and History lessons. So many of us have been blessed because you covered such a wide range of topics that almost every student can benefit. We started a Tuesday evening study where we just sit, listen and take notes. We have music, history, art, music, language and philosophy majors, all of whom thoroughly enjoy them. We have grown to about 40 people and have had to change rooms twice. What is great is that they are funny and well-presented so it's not considered uncool to appreciate them. And, thank you for the clear simple Gospel message which you faithfully present.

Ohio

Hey man. Thanks for the Ferlinghetti poem. Wow right, So what's shaking man? We're still kickin it on the beach with our boom boxes listening to my man Pastor Johnny B Good. People thinking we're wack. But hey they always thought that. Haha. Really getting into the cool stuff Jesus did. Can't wait to see him. Hey man hope you're in SoCal soon. You know where to find me. Rockin with JC. Out.

California

Just a quick note of appreciation for these great messages. Words fail me as I try to say how they have kept me going day after day.

USM

Unbelievable that I get sent to the scariest place I've ever been to and thank God for doing it. I guess it was the only way I would ever get eternal life because with sand blowing in my face I believed Jesus died for my sins. The main reason I want to get back alive is to tell my family how they can be in heaven with me.

USM

June 2013

Johnny, I read and re-read your last email. Once again I think you have demonstrated brilliant insight into Einstein and quantum mechanics. I listened to your lecture on the origins of the four Gospels and found it to be very intriguing. I'm formulating some questions to ask you. Best wishes.

California

Thanks to dear one friends you shoe Jesus

China

I'm not able to thank you enough for the players you sent us guys. It's my only source of spiritual nourishment. May God bless you

USM

To my new friends back home: I can't believe your generosity in sending me the audio player with these mind blowing messages on them. I was so afraid when I got here. They got me through that transition period and continue to bless me.

USM

These messages are my source of daily encouragement
USM

At the repeated insistence of a colleague who has been telling me about a fresh interpretation of quantum mechanics, I went to your website. I was dismayed to find it was a religious site. But I listened and was astonished. One fresh insight after another. I was struck by your observation that the speed of light had not been surpassed, but that time had contracted. As soon as I heard it I realized that was indeed what had happened and was flabbergasted no one had realized it.

I'm curious as to the thought process that led you to that insight? Was it a mathematical derivative or an observation from physics?

Massachusetts

Johnny's reply:

Actually, I don't have any particular insight. Believe it or not, I get all of my information from the Bible.

Jeremiah chapter 33 states that the fixed order of the universe, the set of laws that govern motion, does not change. What a gift from God that is. Without a fixed order there would be no credible observation, and no science! Without this natural order we would not even be able to measure the "spooky" behavior of quarks.

Now, as to the fact that the speed of light did not change, that observation comes from two Biblical facts.

- 1. God says that He is light (I John 1:5), and*
- 2. He says that He does not change (Malachi 3:6).*

Now certainly He was speaking of truths in the spiritual realm but I believe He was drawing an analogy from the laws of physics.

I hope you keep listening. Thanks for writing.
